

Wt - Improvements #10950

make WStandardItemModel more resilient

Description	
The following code will segfault:	
<pre>auto model = std::make_unique<Wt::WStandardItemModel>(); model->removeColumns(0, model->columnCount());</pre>	
Yes, the code does not make a lot of sense and the argument could be made that this is user error, but an API should be able to handle this gracefully.	
I suggest simply doing nothing in removeColumns/Rows() if the count is zero - or throw an exception at my face :)
