

Wt - Feature #1113

Send logs to SYSLOG Server using RFC 5424

12/31/2011 12:35 PM - Anonymous

Status:	New	Start date:	12/31/2011
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
It will be very interesting to send logs to a syslog server (UDP 514).			

History

#1 - 11/26/2013 03:55 PM - Ezra Buehler

What is the status on this? I would love to be able to set "syslog" as logging destination in wthttpd's config or wt_config.xml.

#2 - 08/16/2019 03:54 PM - Aaron Wright

I was looking for this today too. Though I would more interested in Wt using the syslog() function, and the actual destinations being handled by rsyslogd or some other external syslog daemon.

#3 - 08/21/2019 06:13 PM - Roel Standaert

I think (and I've got this in the back of my mind that we should do that sometime) that the logging system should be pluggable. I think Wt should allow you to say: I want to use some other logger for my application, and let you do that by letting you implement some abstract class or something. So then you can use syslog, or sd_journal_print, Poco or whatever to do your logging.
