Target version:	3.3.2		
Description			
<p>When I enter "öäü" (deutsche Umlaute) in the textfield of the Hello World Example (http://jwt.emweb.be/jwt-hello) the response is correct on Firefox 12 but not correct on IE9 or Google Chrome (18.0.1025.168 m)</p> <p>Is this a bug or are there some extra settings required?</p> <p>In my own project I recognized that the output of UTF-8 characters (which I read from a postgresql-DB) works well, but sending UTF-8 characters to the application (e.g. by using a WLineEdit) and showing it immediately using a WMessageBox works on Firefox but not on IE9 or Chrome.</p> <p>Thank you for your answer!</p> <p>Tom</p>

Hello,

This is a 'bug' in tomcat. We're aware of the problem, but the work-around is not yet deployed on our website.

<http://wiki.apache.org/tomcat/FAQ/CharacterEncoding>

Regards,

Wim.
