

Wt - Feature #1361

Add native persistence/serialization to Widgets

07/21/2012 06:08 PM - Jörn M

Status:	InProgress	Start date:	07/21/2012
Priority:	Normal	Due date:	
Assignee:	Wim Dumon	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
Adding support for serialization and/or Wt:Dbp-persistence to the Wt::Widgets would allow to dynamically generate and save GUI-Elements. From this point on it would be feasible to implement visual creation of a GUI and lateron generation of the corresponding C-Code ("wt-creator") or, together with some kind of runtime-scriptlanguage for exposing data-objects (for example boost::python), modification of the interface during runtime (for CMS f.e.).

- Target version set to 3.3.1

Wim,

Could this be provided as a side-effect of the python bindings ?

Regards,

koen
