Hey,

What version of winst is this? I couldn't reproduce this (on Ubuntu 12.04.1 LTS).

Recent winst (git) versions contain:

```
PKG_CHECK_MODULES([libpng], [libpng >= 1.2.0], [have_libpng=yes], [true])
```

This agrees with what I see happening in other autoconf scripts.

Btw, my autoconf version is :

```
koen@vierwerf:~/project/wt/winst$ autoconf ---version
```

```
autoconf (GNU Autoconf) 2.68
```

```
Copyright © 2010 Free Software Foundation, Inc.
```

```
License GPLv3+/Autoconf: GNU GPL version 3 or later
```

```

Written by David J. MacKenzie and Akim Demaille.

Autoconf 2.50 chosen by Debian wrapper script.

For information and tuning advice see autoconf(1).

Regards,

koen

Hi,

I can reproduce it under Debian 7.4.0 x64.

I just did a git clone, then autoconf, and it failed when running the generated configure script.

Regards,

sywesk
