Description			
Hello! I want to know if it's possible in Wt to make widget with content from some site (p.e. http://google.com) and then just simply add this widget to layout. I want to find some similar to QWebKit. Or is there any other way to make this?

Hey,

I guess you can only do that by embedding this site inside an --- You can do that using WText and the TextFormat::UnsafeXHTMLText format option.

Regards,

koen
