

Wt - Feature #2715

[PROJECT] Issues should have Categories

02/24/2014 11:26 PM - I. Lazaridis

Status: New	Start date: 02/24/2014
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category:	Estimated time: 0.00 hour
Target version:	
Description Redmine provides Categories: http://www.redmine.org/projects/redmine/wiki/RedmineProjectSettings#Issue-categories Some Example Categories for wt WtDbo WtAuth WtServer WtWidgets Project (Issues subjecting the project resources and processes) It's not so good if there are too many categories, usually it's dictated by the amount of issues filed (e.g. <i>only</i> when one widget gets many issues filed, then it gets an own category)	

History

#1 - 03/03/2014 10:39 PM - I. Lazaridis

Any chance to get those categories? It makes things really simpler.

#2 - 03/21/2014 12:09 PM - I. Lazaridis

Is there any reason why you don't even comment to this issue?

Such "Categories" are really a very basic organizational construct, found in nearly **every** open-source project.

And it needs really just a few minutes to implement. An additional benefit is that you can (optionally) assign issues automatically to project members.

Issue categories

Issue categories let you to organize issues. Categories can for example correspond to the different components of your project.

You are able to configure your own set of issue categories for each individual project. It is also possible to auto-assign new issues to a specific user based on the chosen category of the newly created issues. The following properties are configurable for (each of the) issue categories:

Name: The text you want to be displayed to identify the issue category. This field is required.

Assigned to: The project member to who you want to auto-assign newly created issues in this category. This field is optional.
