Description			
<p>In my code and on the treeview-dragdrop example on your website I am unable to see the context menu on the subfolders in the sandbox treeview when using a Mac laptop.</p> <p>To repro:</p> <p>Trying to right click on a Mac laptop using the Ctrl + Click method. It seems <code>WMouseEvent(event.button())</code> comes back as <code>WMouseEvent::LeftButton</code> rather than <code>WMouseEvent::RightButton</code> on both Safari and Chrome.</p> <p>This issue does not seem to exist in Firefox.</p> <p>Additionally, the item in the model is unselected.</p> <p>In my code I've tried to combined both <code>(event.button() WMouseEvent::LeftButton && event.modifiers() Wt::ControlModifier)</code> to work around the problem for Mac but the issue still remains that my selected item is being unselected.</p> <p>Any ideas how to get around this? It's important that my selected item remains selected after the right click happens.</p> <p>thanks in advance,</p> <p>Cyn</p>
