## History

### #1 - 06/30/2014 12:47 PM - Michael Shestero

My problem isn't solved. By the way I use the latest cmake (3.0).

Meanwhile as I understood "installation" is just copying headers and libraries into the two definder folder. Can you tell me wich files I need to get?

I am going ro use WPdfRender statically linked.

### #2 - 06/30/2014 05:57 PM - Wim Dumon

- Status changed from New to Feedback

2.8 works fine. Those .cmake files which contain the errors are files generated by cmake itself, so I wonder if this is not a bug in cmake 3.0. Does cmake 3 reports the same warnings on other target compilers?

From the build dir, you need the library files (.a, .dll). The include directory is a copy of the header files in Wt's source directory. Furthermore, you need the folder named 'resources' which is included in wt's .tgz.

Wim.

**#3 - 07/01/2014 03:04 PM - Michael Shestero**

With cmake-2.8.12.2-win32-x86.exe and I see the same errors during installation.

By the way I use MinGW and environment from Qt 4.8.4.

```
d:\Qt\4.8.4>make --version
GNU Make 3.82.90
Built for i686-w64-mingw32
```

**#4 - 07/01/2014 04:54 PM - Wim Dumon**

did you remove your entire build directory?

I don't know the effect of mixing tools of different environments.

Wim.

**#5 - 07/04/2014 05:12 PM - Michael Shestero**

Yes. Complete rebuilding with cmake-2.8.12.2 solves this installation problem!
