

Wt - Bug #3410

WCheckBox setting CSS "white-space: nowrap"?

Description			
Hi,			
I have a WCheckBox widget with a associated text and I want to suppress word-wrapping of the checkbox and the descriptive text using CSS "white-space: nowrap".			
But with current implementation there is no appropriate method and the WAbstractToggleButton implements its own label instead of using WFormWidget::label() attribute.			
How can I achive this?			
Regards,			
Stefan

You can use a workaround:

```
checkBox->doJavaScript (checkBox->jsRef(), ".style.whiteSpace='nowrap'");
```

- Status changed from New to InProgress
- Assignee set to Korneel Dumon
- Target version set to 3.3.4

Add a WCheckBox::setWordWrap() as in WLabel.
