<b>Description</b> We want to display checkbox in a Table header column as its item instead of String. I tried using WStandardItem as WCheckbox. But it still renders them as String/Object.  Requirement is to select all the checkboxes with in a column on a table when user selects checkbox on a header row.  For reference attached image file with highlighted by orange colour.  We are using <code>model.setHeaderData(index, Orientation.Horizontal, value)</code> line of code to Set header data for a column.  Please assist to add checkbox on header row and how to get action listener if user selected/unselected checkbox.

- Status changed from New to Resolved

My apologies for the pseudo-code. To check/uncheck the checkbox in the header:

```
model.setHeaderData(index, Orientation.Horizontal, value, CheckStateRole);
```

To show/hide the checkbox in the header:

```
model.setHeaderFlags(index, Orientation.Horizontal, HeaderIsUserCheckable);
```

To react when changed, reimplement `setHeaderData` and do what needs to be done when the `CheckStateRole` data of the first column is changed.

Best regards,

Wim.
