Hi,

What version of MySQL, on what OS? Did you install mysql manually or through some package?

BR,

Wim.

#2 - 09/12/2014 01:21 PM - Michael Z.

MySQL version 5.6.20_1, which is installed through homebrew package manager for MacOS (Mavericks, 10.9.4). Actually, after installation, only library of "libmysql" could not be found in the installation directory, while other libraries such as 'libmysqlclient' could be found.

#3 - 09/12/2014 03:15 PM - Wim Dumon

There's only one library required, but it may have many different names depending on OS etc. Current Wt looks for one of these: mariadb libmariadb mariadbclient mysqlclient libmysql.

See cmake/WtFindMysql.txt

Set MYSQL_LIBRARY to the name that your installation is using.

Wim.

#4 - 09/13/2014 09:17 AM - Michael Z.

okay, thanks, Wim. I will try it.
