

## Wt - Bug #3690

### WTableView virtual scrolling and (sometmes) selection broken by browser zoom.

12/01/2014 05:58 AM - Jesse Pepper

<b>Status:</b>	Closed	<b>Start date:</b>	12/01/2014

<b>Target version:</b>	3.3.4		
<b>Description</b>			
<p>WTableView calculations for the selected row and row height and so on seem to be messed up by using the browser in a zoom other than 100%. This causes very serious problems, like when a row is double-clicked, quite often a different row is the row that is activated, and this can go unnoticed. This also has an effect on the "Loading" graphic, where the rows that are visible are calculated incorrectly and the loading graphic is never replaced by the real records.</p> <p>To reproduce, simply go here: <a href="http://www.webtoolkit.eu/widgets/trees-tables/mvc-table-views">http://www.webtoolkit.eu/widgets/trees-tables/mvc-table-views</a> and change the browser zoom and then start scrolling the WTableView, and then scroll the table under the heading "Virtual scrolling".</p>

Hey,

I believe we've fixed this in 3.3.4; can you try with the latest RC?

We still need to update the examples on webtoolkit.

Regards,

koen
