

## Wt - Bug #3718

### WTemplate with <iframe> or <object> blocks mouseWentDown

01/08/2015 09:26 AM - Max Quatember

<b>Description</b>			
Hi guys!			
First of all a happy new year! :-)			
I have a problem with upgrading from 3.3.1 to 3.3.4 RC1 (downloaded from homepage, self-built).			
I have a WTemplate showing our blog on the start screen of our app.			
In 3.3.4 if I connect mouseWentDown and mouseWentUp in any other widget of the app, mouseWentDown is not fired, mouseWentUp is.			
Is this a bug or do I have a more intelligent way to embed other content...			
(Test case attached)			
best regards,			
Max

Hey Max,

I could only reproduce this with the current Wt git version with IE<9 --- I've fixed this now. The actual problem was in creating the dialog rather than the event handling.

But perhaps you were seeing a different issue?

Koen

Hi Koen!

Just checked with latest git. Everything OK for me!

Thanks a lot!

BR,

Max
