Target version:			
Description			
<p>I want to set cookie value before redirect the page and get that cookie value after redirect the page as following code.</p> <p>Before Redirect:-</p> <pre>WApplication.GetInstance().setCookie("product-save", "true", 1200);</pre> <p>WApplication.GetInstance().redirect("products");</p> <p>After redirect the page, retrieve cookie from another page as follows:-</p> <pre>if(WApplication.GetInstance().getEnvironment().getCookieValue("product-save")!=null && WApplication.GetInstance().getEnvironment().getCookieValue("product-save").equals("true")){ result.bindWidget("MessageBox", MessageBar.showMessage("Save Successfully",this)); WApplication.GetInstance().removeCookie("product-save"); }</pre> <p>But after redirect the page it can not retrieve the "product-save" cookie value. Because not set the "product-save" value. Pls let me know how can I do this?</p> <p>Thanks.</p>
