

Wt - Feature #400

Loading indicator support for providing an appropriate message.

Target version:	
Description I currently interpret the loading indicator in wt to mean that we are waiting a response from the server. I think it may be useful to provide an application user with more context information using the loading indicator or any other scheme you savvy fellows come up with. for ex. inform the user when we comms are lost with the server vs the server being busy with a request.
