<b>Description</b>			
Hi ,			
I am facing a weird problem using a WTableView within a WContainerWidget.			
The point is that using for example the first column as static header			
tableView->setRowHeaderCount(1);			
Changes the behaviour of the event handling which seems to be			
redirected to the event handling defined in the parent container widget !			
How can i prevent such a behaviour ?			
I would like to have event handled on the tableView area exactly the way			
i define it from within the tableView widget class ( as it should be? )			
Thanks in advance !			
Denis
