

Wt - Bug #4383

Hints for compiling Widgetgallery example

08/09/2015 11:53 PM - John Robson

Target version:			
Description			
I believe that the Widgetgallery is the most complete example of Wt features:			
"Forms > Line/Text editor"			
You need download and install TinyMCE, version 3.5 # http://download.moxiecode.com/tinymce/tinymce_3.5.11.zip			
And put (or create a symbolic link) into Resources folder:			
\$ sudo ln -sf ../tinymce/jscripts/tiny_mce /usr/share/Wt/resources			
For: "Trees & Tables > MVC Tree Views / MVC Item models"			
You need setup the "GIT_REPOSITORY".			
The compilation parameter "-D GIT_REPOSITORY="/path/..."\" won't work.			
CMake Warning:			
Manually-specified variables were not used by the project:			
GIT_REPOSITORY			
Should be good enable this on the compilation process.			
You need setup manually in:			
.../wt/examples/widgetgallery/examples/TreeView.cpp			
.../wt/examples/widgetgallery/TreesTables.C			
But still not working.
