Target version:	3.3.6		
Description			
Hello,			
I'm trying to compile on vs2010 using WPdfRenderer, and I'm getting this compiler error:			
<pre>1>chrono_input_server.obj : error LNK2019: unresolved external symbol "_declspec(dllimport) public: virtualthiscall Wt::Render::WPdfRenderer::~WPdfRenderer(void)" (imp??1WPdfRendererRender@Wt@QAEXZ) referenced in function "class ATL::CStringT<wchar_t,class StrTraitMFC_DLL<wchar_t,class ATL::ChTraitsCRT<wchar_t> > > __cdecl xhtml_to_pdf(class ATL::CStringT<wchar_t,class StrTraitMFC_DLL<wchar_t,class ATL::ChTraitsCRT<wchar_t> > >)" (?xhtml_to_pdfYA?AV?\$CStringT_WV?\$StrTraitMFC_DLL_WV?\$ChTraitsCRT_WATL@@@ATLV12Z)</pre>			
<pre>1>chrono_input_server.obj : error LNK2019: unresolved external symbol "_declspec(dllimport) public: voidthiscall Wt::Render::WPdfRenderer::~setDpi(int)" (imp?setDpiWPdfRenderer@Render@Wt@QAEXHZ) referenced in function "class ATL::CStringT<wchar_t,class StrTraitMFC_DLL<wchar_t,class ATL::ChTraitsCRT<wchar_t> > > __cdecl xhtml_to_pdf(class ATL::CStringT<wchar_t,class StrTraitMFC_DLL<wchar_t,class ATL::ChTraitsCRT<wchar_t> > >)" (?xhtml_to_pdfYA?AV?\$CStringT_WV?\$StrTraitMFC_DLL_WV?\$ChTraitsCRT_WATL@@@ATLV12Z)</pre>			
<pre>1>chrono_input_server.obj : error LNK2019: unresolved external symbol "_declspec(dllimport) public: voidthiscall Wt::Render::WPdfRenderer::~setMargin(double,class Wt::WFlags)" (imp?setMarginWPdfRenderer@Render@Wt@QAEXNV?\$WFlagsW4Side@Wt@@@3Z) referenced in function "class ATL::CStringT&lt;wchar_t,class StrTraitMFC_DLL&lt;wchar_t,class ATL::ChTraitsCRT<wchar_t> &gt; &gt; _ _ cdecl xhtml_to_pdf(class ATL::CStringT&lt;wchar_t,class StrTraitMFC_DLL&lt;wchar_t,class ATL::ChTraitsCRT<wchar_t> &gt; &gt;)" (?xhtml_to_pdf@YA?AV?\$CStringT_WV?\$StrTraitMFC_DLL_WV?\$ChTraitsCRT_WATL@@@ATLV12Z) 1&gt;chrono_input_server.obj : error LNK2019: unresolved external symbol "_ *declspec(dllimport) public:thiscall Wt::Render::WPdfRenderer::WPdfRenderer(void **,void**)" (imp*??0WPdfRenderer`Render@Wt@`QAE`PAX0`Z) referenced in function "class ATL::CStringT&lt;wchar_t,class StrTraitMFC_DLL&lt;wchar_t,class ATL::ChTraitsCRT<wchar_t> &gt; &gt; _ _ cdecl xhtml_to_pdf(class ATL::CStringT&lt;wchar_t,class StrTraitMFC_DLL&lt;wchar_t,class ATL::ChTraitsCRT<wchar_t> &gt; &gt;)" (?xhtml_to_pdf@YA?AV?\$CStringT_WV?\$StrTraitMFC_DLL_WV?\$ChTraitsCRT_WATL@@@ATLV12`Z)</pre>			
I've reviewed the .lib files looking for definitions of WPdfRenderer and looks to be missing on this build,			
Any info welcome,			
Best Regards
