

Wt - Bug #5622

WPainter draws ellipses as 360 degree arcs, which is not the same

03/24/2017 11:52 AM - Roel Standaert

Status:	New	Start date:	03/24/2017
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
This becomes clear when drawing ellipses with a thick stroke and the square cap style: an arc has a cap at its start and end, whereas an ellipse does not have caps. Ideally, this should be specialized for every device, and their dedicated drawEllipse function used if available.			

History

#1 - 03/24/2017 03:30 PM - Roel Standaert

- File *paintstroke.cpp* added

drawArc seems to have many issues. Luckily, we don't actually use it internally in Wt. Attached is a test that shows some of the issues.
