

## Wt - Bug #5624

### WApplication::bind() documentation is misleading about WServer::post()

03/26/2017 12:49 PM - Kayra Akman

<b>Status:</b>	New	<b>Start date:</b>	03/26/2017

<b>Target version:</b>			
<b>Description</b>			
From WApplication::bind() documentation:			
However, while WServer::post() guarantees that the application to which an event is posted is still alive,...			
This sounds as if WServer::post() keeps the application instance alive whereas it checks whether the instance is alive before calling the passed-in function.
