Target version:			
Description			
All methods I tried. But I get only Cannot get NET ERR Aborted error for wt.css or bootstrap.css. What can be done?			

History

So you have either a symlink to the Wt resources folder in your docroot, or are using --resources-dir= to specify the path to the resources folder?

In that case, what is the response you see in your network tab exactly? Also, what do the logs of Wt show?
