<b>Description</b> Support to create and sign JWT tokens.  Application: google provides 'service accounts', which can be used for directly querying a google api without end-user credentials. The service account has an email-address that can be given access to certain data (eg. a spreadsheet). To obtain an access code for the api, you need to send a JWT token to the google server.  <a href="https://developers.google.com/identity/protocols/OAuth2ServiceAccount">https://developers.google.com/identity/protocols/OAuth2ServiceAccount</a>
