

Wt - Bug #7281

WFileUpload keeps previously applied styling when enableAjax() is called

Description			
This can be seen in the widget gallery: https://www.webtoolkit.eu/widgets/forms/file-upload			
If you go to the file upload directly with a JavaScript-enabled browser, then (because of progressive bootstrap) it will first load an <code><input type="file"></code> based WFileUpload, but then quickly replace it with the iframe-based one. This is fine, but the theme applies some styling to this input that sticks around.
