Target version:	
Description The WDateEdit provides a calendar picker; <code>WCalendar* Wt::WDateEdit::calendar() const</code> It would be nice if we could give the WDateEdit a calendar that we wish to use instead; <code>Wt::WDateEdit::WDateEdit(std::unique_ptr<WCalendar> calendar)</code> This way we can have our own calendar as a picker, rather than the default Wt calendar.

Actually... WCalendar is really not suitable as an abstract calendar base-class. So, maybe never mind.
