Target version:			
Description			
The following should work:			
<pre>tableview->select(model->indexFromItem(model->insertRow(model->rowCount(),items)));</pre>			
Is there another simple way to select the row I just inserted?

Ugh, I just realized that it probably doesn't make sense to return just one of the items in 'items'. But the question still stands; how to select a row I just inserted?

#2 - 10/21/2020 12:44 PM - Velvet Jones

I suppose WStandardItemModel::appendRow() and insertRow() should return a WModelIndex.
