

JWT - Bug #8893

Port Dbo forms to JWT

08/02/2021 03:07 PM - Roel Standaert

Status:	New	Start date:	08/02/2021

Target version:	4.7.0		
Description			
We added Dbo-based forms to Wt: https://redmine.webtoolkit.eu/issues/8622			
We would like to have something similar for JWT.			
However, the implementation for Wt is very template-based, so this is not something we can automatically translate. Also, we based Wt's implementation on Dbo because the persist function serves as a sort of visitor for every member of the class. We don't need to do that with JWT (and JWT Dbo does not use the persist function), since Java has reflection capabilities.			
We could just create something like an AutoFormModel and AutoFormView, that just uses reflection? We can keep the form delegate system more or less the same.			
We should also add an example like the dbo-form example.
