Description

Namaskaara,

We have MsSQL, MySQL and PostgresSQL backend support (Wt/Dbo/backend).

I am into a project that deals with huge tables. I want to utilize ClickHouse db as its meant for such situations.

All these time I have been using MySQL backend.

Since CLICKHOUSE is has nearly identical SQL as MySQL can a ClickHouse backend be created?

I tried modifying MySQL but got lost since there is not much documentation to help write a new backend.

If somebody can help me I can write and submit it Wt Community.

Regards
Rathnadhar K V

ClickHouse url : https://clickhouse.tech

(sorry I did not include it earlier).
