Description			
Hi,			
I've used a WCartesianChart object to plot some data series containing values in the range 1e-6 to 1e-9 however I'm only seeing axis labels at 1e-6, 1e-7, 1e-8 and 1e-9.			
If I zoom into the graph then I end up with one or maybe even zero labels.			
Ticks appear on the axis as expected there are no corresponding labels for minor ticks, only the major ticks.			
Is there anything you can suggest that might resolve this for me?			
Kind regards,			
Mike

Hi,

Never mind.

I thought the problem might be due to me missing an optional dependency such as Haru, Pango or GraphicsMagick but after going through the source code I see that labels are intentionally omitted for minor labels.

Kind regards,

Mike
